

Describe the process of germination in seeds and bulbs

Draw how your chosen seed germinates over the four days. You can add labels to show any important things you notice.

day 1

day 2

day 3

day 4

Describe how the seed changes over the four days

Describe the process of germination in seeds and bulbs

Answer the questions below

pea seed
before planting

pea seed
after 24 hours

In the picture above is a pea seed before it was planted and the same seed a day after planting. Describe how it has changed.

Describe the difference between a seed and a bulb.

Explain why seeds and bulbs don't need light to start growing.

Stretch:
It doesn't matter which way up you plant a seed. Suggest why it doesn't matter.

Challenge:
Seeds and bulbs can detect the cold. Suggest why it is important that a seed can tell when it is cold.
